Quick Start Guide: iOS Iridium[®] Mail & Web app and Iridium AccessPoint

iOS Iridium Mail & Web app and Iridium Mail & Web mobile application are available for download on the Apple iOS App StoreSM. This quick start guide provides step-by-step instructions for configuring Iridium Mail & Web application and its various features to work with Iridium AccessPoint.

- 1) Download Iridium Mail & Web app
While connected to a Wi-Fi network (recommended) or a terrestrial cellular network with data connection, search for 'Iridium Mail & Web' in iTunes app store. Download and install the app on your iPhone[®] or iPad[®] running iOS 6.1 or higher.
- 2) Register for an Iridium account
Navigate to www.iridium.com/mailandweb URL to fill out the registration form, follow the instructions and register for a username and password. Select 'Iridium AccessPoint' from the device selection drop-down menu in the registration form. Registration for an account is free and required to use the application.
- 3) Pair the iOS device with Iridium AccessPoint
 - i. Connect your Iridium AccessPoint to your Iridium satellite phone with the provided USB cable.
 - ii. Set up the phone in an outdoor area with open access to the sky and adequate signal strength prior to use.
 - iii. Turn your Iridium AccessPoint device switch to "On" when attempting to establish a Wi-Fi hotspot.
 - iv. Go to "Settings" on your iOS smartphone or tablet
 - v. Select "Wi-Fi".
 - vi. Under "Choose a Network", select "PHS300IC-xxxx". Wait for your iOS device to connect to the Iridium AccessPoint Wi-Fi network.

4) Login to the application

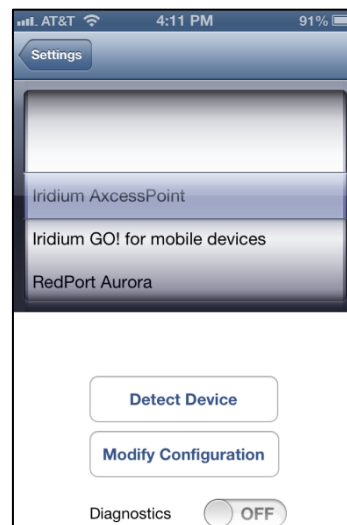

Open the Iridium Mail & Web app. You will be asked to enter the registered username and password. Enter the credentials as supplied during registration and click on 'Login' to gain access to the application. Accept the terms and conditions outlined in the End User License Agreement popup. This dialog is displayed only on the initial user login.

5) Configure device connection type

After logging in to the application for the first time, the app will guide you to configure the device connection type. Click OK to be redirected to the device selection screen. Select 'Iridium AccessPoint' as your connection type and click the back button. Alternatively, you can run the device auto-detection capability by selecting 'Detect Device' button.

Note: Ensure that the 'Diagnostics' is turned off. This is an advanced option and is used Iridium support personnel to troubleshoot device connection & detection issues with the user.

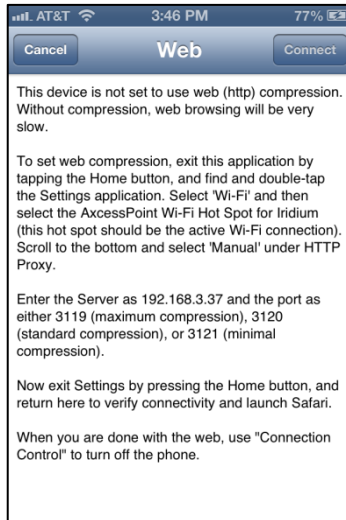

6) Configure Web surfing

Iridium Mail & Web allows you to surf the web. To access web pages via Iridium Mail & Web, follow these instructions:

- a. Select the Web icon on the home screen.
- b. Follow the instructions outlined on the screen to enable compression and setup a proxy server.

To access web pages using Iridium Mail & Web:

- i. Click on the 'Web' icon on the home screen
- ii. Click the upper-right "Connect" option to start your connection
- iii. Launch Safari browser, enter a mobile website and press "Go" (see www.iridium.com/mobile for list)
- iv. Continue to access Web content. When finished, close Safari browser and return to the Iridium Mail & Web app.
- v. Click the "Connection" icon on the main Web screen and stop the data connection

Note: Airtime charges will continue while the connection is active. Do not visit standard Internet pages as videos and graphic-heavy pages designed for broadband networks will not download properly using Iridium Mail & Web.

7) Configure Social Media settings (Facebook)

Facebook is a great way to update many people with the push of a single button. Most people post to Facebook from the Facebook page, which is too large for handheld satellite phones to conveniently update. Configuring Wireless Email Gateway for Facebook allows simple posts to Facebook by converting your message into an email format that Facebook will accept and post. You can even upload photos. They will be resized, compressed, and posted at a size that works over handheld satellite phone data feeds. Broadband users can also upload video.

- A. **Activate Facebook Posting:** Requires a Post-by-Email Address, assigned to you by Facebook. You also must link your cellular phone number to your Facebook account. To find your Post-by-Email Address:

- i. Open a web browser, and go to: www.facebook.com
- ii. Sign into your Facebook account.
- iii. Click on the  in the top right corner of the screen.
- iv. Click "Account Settings"
- v. Click "mobile" in the left column
- vi. Click "Add a mobile phone number"
- vii. Type in your Facebook password
- viii. Select your country and you cellular phone number.
- ix. Follow on screen instructions. Facebook will text you a code to your phone to put in the box in the Facebook window.
- x. After your phone is linked to your Facebook account, you will find your "Post-by-Email Address" on the mobile section of the account settings.
- xi. Copy or write down the address.
- xii. Enter the Post-by-Email Address by selecting the Settings icon on the home screen and navigating to Social Media > Facebook > Secret Email. Then click <OK>. Notice that the Facebook icon on the user interface is now active.

B. Posting to Facebook

- i. Click the Facebook icon on the home screen to open the "Post to Facebook Wall" window.
- ii. Enter the status update (maximum of 255 characters) in the text box.
- iii. To upload a photo, click the <Browse> button and select the image to upload.
- iv. Click <OK>. This creates a message ready to be sent on your next connection.
- v. The posting will be sent the next time you make an email connection.

8) Configure Social Media settings (Twitter)

- i. Connect to the internet at home before going on your trip. Twitter registration will fail if you are not connected to the internet.
- ii. Click on the Settings icon on home screen, select 'Social Media' and turn on Twitter
- iii. A window will appear asking you to login to Twitter to allow Iridium Mail & Web to post on your behalf

- iv. Allow Iridium Mail & Web access to your Twitter account
- v. A PIN will be generated once authentication has been granted. Record the PIN.
- vi. Enter the PIN in the appropriate location and hit OK.

Once this configuration is complete, tweets can be posted via Iridium Mail & Web using the Twitter icon on the home screen.

9) Configure weather forecast service

The application provides various user-customizable settings for the weather forecast service. To configure these settings

- i. Click on Settings icon on the home screen
- ii. Click on 'Weather'

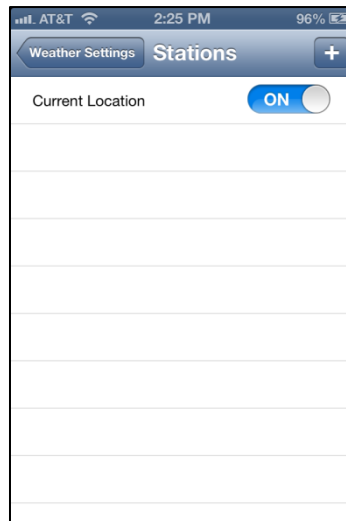

- iii. Set locales: allows you to request weather information for different locations.

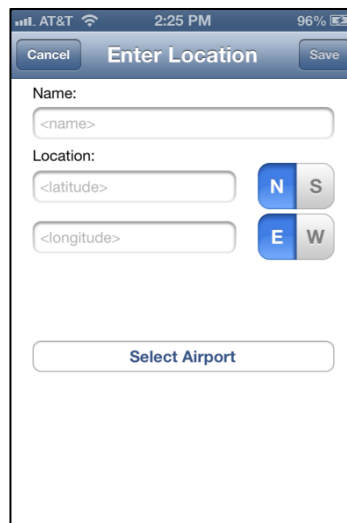

You can either save current location, enter latitude\longitude coordinates manually or select from a list of approx. 9000 airports worldwide

a. Click on 'Locations'

b. To add a location, click on '+' button.

- To save current location, click OK when prompted for "Iridium Mail & Web would like to use your current location"
- 'Enter Location' option allows you to enter location lat\long coordinates manually in decimal format (ex. Lat: 40.76 N, Lon: 73.984 W) and add a name (ex. New York, NY). Other formats such as degrees minutes seconds, degrees decimal minutes are also supported. You can set the format in Weather settings.
- Select airport: Search bar is provided to search for an airport either using the 3-letter airport code or by city name

c. Enter a user-friendly name

- iv. Configure the display frequency, duration (days), units and types of various weather parameters to request forecast

- 10) Exit Settings and return to the home screen
- 11) You are now ready to use Iridium Mail & Web features.
